

CASE STUDY

Location
Stamford, Peterborough

Area of operations

- Decomm
- Manufacturing

In June 2018 Pentagon Assurance were asked by Cummins Generator Technologies to provide CDM Support on a decommissioning project at their Stamford site

Our Role was to provide CDM support to both Principal Designer and Principal Contractor and lead site supervision and safe systems of work. Pentagon facilitated pre-construction planning meetings to generate pre-construction information and the construction phase plan.

The works involved dismantling and decommissioning large 500t machine presses and associated infrastructure for transportation to Romania.

We ensured that the Health and Safety documentation was accurate and compliant and the safe working method was followed, There was a significant focus on LOLER (lifting Operations and Lifting Equipment Regulations) for multiple complex and heavy lifts.

The project was completed with no lost time incidents during 14000 man hours worked.

WHAT OUR CLIENT SAID:

Pentagon Assurance oversaw all aspects of CDM management, supporting Principal Designer and Principal Contractor duties, with 14,000 man hours worked in the decommissioning of our core build and press shop facilities. The CDM operation were led without incident and the project delivered to schedule.
