COMPANY CASE STUDY

Prioritising health, safety and wellbeing with ISO 45001 with a cloud based platform

AT A GLANCE

Challenges

- New computer system
- Need for structure
- Development of a health and safety management system

Benefits

- Centralisation
- Agile working
- Automation
- Monitoring and Tracking
- Allocation of responsibility
-

OBJECTIVES

Industrial Roofing Scotland (IRS) are an established business with a less established health and safety management system. The desire to have a cloud based, centralised system meant a bespoke management system was needed to support the strategic direction.

SOLUTIONS

The Monday.com system was already being built for other aspects of the business by IRS and Dimension's role was to, not only build the bespoke health and safety management system, but, learn the Monday.com system in order to integrate the ISO 45001 certified health and safety management system.

Dimension have become a retained part of the IRS team with ongoing support and development of the system following certification and continuous improvement as a commitment of the standards.

BENEFITS

Client Relationships

Clients are able to access the Monday.com system achieving full transparency with interested stakeholders when it comes to health and safety.

Strategic and Operational Direction

The adaptability of the Monday.com system paired with competent, experienced support means the strategic and operational direction can be set, monitored and reviewed readily with allocated responsibilities.

Ongoing Risk Management

Third party access means that interested stakeholders readily have access to chosen parts of the health and safety management system. Improving relationships resulting in further contracts.

"Melissa's passion, dedication, realism and commitment has not only enhanced our safety standards but also fostered a culture of safety and well-being among our team."

Craig Gibson

Finance Director
