

#1 Case Study; Accident Investigation

Scope;

Review sub-contractor Health & Safety procedures as a proactive approach after a reported accident occurred onsite due to the unsafe handling of a man riding basket during a mobile crane lift operation.

My Approach;

- 1 day site visit to discuss with site management team the details of the accident
- Carry out an in-depth accident investigation report
- Interview operative's and eye witness and records of statements
- Review Risk Assessments & Method Statements

Outcome;

- Accident root cause identified and areas for improvement
- Recommendations made for sub-contractor Health & Safety approach onsite
- Further advice, guidance and support provided to site management team, site operatives and sub-contractor to improve the Health & Safety culture onsite.
