Royal Opera House

RB Health and Safety Solutions Ltd (RBHSS) were asked to tender for the Royal Opera House (ROH) audit in 2018, as the organisation had not previously had an external audit. The audit followed the HSG65 model and was carried out against the relevant health and safety legislation and guidance. We have since been invited back each year to carry out further audits and we report to the board of trustees on an annual basis regarding the performance of the venue. This venue is a complex and large operation, with theatre operations, productions, workshops, costumes, armoury and rehearsals all happening in one place. The client has been very pleased with the audit process and has since invited us back to assist in other areas of health and safety.
